

Amendments to the Specification:

Please replace the paragraph beginning on page 6 of the amended specification, line 14, with the following rewritten paragraph:

-- Fig. 3 shows how the actuator wheel 11, which can be moved in four directions 13, 14, 15, 16, interacts with a circular display area of a circular mobile telephone 21. The movement of the actuator wheel 11 can occur in a non-latching (i.e. free) manner, or can alternately incorporate a latching mechanism, shown as reference 36 as an example, to provide latching movement during rotation. Also, a stop, shown as reference 35 as an example, may alternately be incorporated on actuator wheel 11 to restrict movement of the wheel during rotation.---
